

LOCKED IN TIGHT

■ Mather Automotive is now offering the CG Lock, a performance-enhancing seatbelt accessory that will keep you firmly strapped in your seat. The benefits of this device will keep you from sliding around in the seat, whether or not you're driving a high-performance vehicle, or a Low-gear rockcrawler. If you've ever 'wheeled at extreme

angles and had to brace yourself against the door, passenger seat, or roll bars to keep your feet lined up with your peddles, then you know what the benefits are of having your hips glued securely to the seat are. Seatbelt tension is adjusted by pulling up on the shoulder strap and can be released in seconds. The CG Lock enhances your body's feeling of the movement and performance of your vehicle. This device is for use on factory seatbelts — not aftermarket harnesses. This is not a safety device and does not improve the safety of the seatbelt. For more information, contact: Mather Automotive Innovations Inc., www.cg-lock.com.
